

4<sup>th</sup> class Math Group Work- Ms. Sheridan

*Week of 22<sup>nd</sup> June- 25<sup>th</sup> June*

Hello girls,

I hope everyone had a lovely weekend. It is hard to believe this is the last week of school before the summer holidays. Our work this week is a little more fun, so I hope you enjoy it.

I wish I could see you all in person to say well done on a fantastic year's work. Everyone has worked so hard and deserves some time off in the summer 😊

Ms. Sheridan

**Try these outdoor activities throughout your week 😊**

Outdoor Maths ★

Using natural objects, can you make different 2D shapes? Can you use stones to make a circle? Can you make a triangle from twigs?

Which natural objects could you use to make a pentagon?

Outdoor Maths ★

Place a hoop on the grass and estimate with your partner how many flowers are inside. Count them! Was your estimate correct?

Will there be the same number if you move your hoop somewhere else? How could you record how many flowers are in the hoop?

Outdoor Maths ★

Find different natural materials and turn them into a natural symmetrical pattern. Can you make both sides look identical?

Could you use different 2D-shapes within your picture? Do you know any patterns that exist in nature that are symmetrical?

Outdoor Maths ★

Using different natural materials, create your own pattern. What would come next in your sequence? What would the 10th object be? Or the 20th? Or the 100th? How could you work it out?
